

Homework #3

Fall 2015

Due date: 2015/11/15

Mining Battle

You are the owner of a mine shaft with 4 hard-working miner. One day, you want to know that who is the best miner in your team and held a mining competition.

Requirements

- Write a program with 1 argument "map_name".
- This program need to read the map file according to "map_name"

■ The content of map file will like this:

```
dcslab@NetPro:~/NetPro/hw3$ cat map1
..***
**#. *
#####
.*##*
.*#*.
```

- ◆ '*' means a gold in there.
- ◆ '.' means an empty hole
- ◆ '#' means a wall

- After reading the map file, show the map by this format:

```
dcslab@NetPro:~/NetPro/hw3$ node multi_process.js map1
-----
|. . | ** |
| ** | . * |
|-----|
|. * | ** |
|. * | * . |
|-----|
map size: 5*5
```

- Please add boundaries and replace '#' by '-' or '|'.
- And then, show the size of this map (width * length)
- Now, create 4 processes (or threads) to represent the miner.
 - The miner need to collect the gold in assigned field.
 - ◆ When he meets a gold, the score of this miner will plus one.
 - ◆ When he meets a hole, nothing happen.
 - ◆ The miner cannot across the wall.
 - The field of each miner would like:

```

-----
|*****. **|*****. *.|
|**#1*****|**#2*****|
|*****. **.*|***...****|
|-----|
|**..*****|*****. **.|
|**#3.***|**..#4*****|
|-----|

```

- After the miner finishing his job, send his score back to parent processes and terminate this process (or thread).
- When the program receive all results from 4 miner, show every one's score and choose the best one.
- If a miner has highest score, tag him a notation "win"

```

-----
|*****. **|*****. *.|
|**..*****|*****. **.|
|*****. **.*|***...****|
|-----|
|**..*****|*****. **.|
|*****.***|**..*****|
|-----|
map size: 21*6
Miner#1: 23
Miner#2: 26 (win)
Miner#3: 15
Miner#4: 18

```

- If two or more miner have highest score, tag them a notation "draw"

```

-----
|..|**|
|**|. *|
|----|
|..|**|
|..|*.|
|----|
map size: 5*5
Miner#1: 2
Miner#2: 3 (draw)
Miner#3: 2
Miner#4: 3 (draw)

```

- We would not tell you the size of map, but it is rectangle and maximum would not greater than 2000*2000.
- Walls would be orthogonal.

Sample Run

```

-----
|. . |**|
|**|. *|
|-----|
|. *|**|
|. *|* .|
|-----|
map size: 5*5
Miner#1: 2
Miner#2: 3 (draw)
Miner#3: 2
Miner#4: 3 (draw)

```

```

|*****.**|*****.*.|
|**.******|***.******|
|*****.**.*|***...****|
|-----|
|**.*.******|*****.**.|
|*****.****|**.*.******|
|-----|
map size: 21*6
Miner#1: 23
Miner#2: 26 (win)
Miner#3: 15
Miner#4: 18

```

```

-----
|.***|***|
|***.|***|
|*.*.*|***|
|**.*|***|
|-----|
|*.*.*|***|
|.*.*|*.*|
|**.*|*.*|
|.*.*|**.|
|**.*|***|
|-----|
map size: 8*10
Miner#1: 12 (draw)
Miner#2: 12 (draw)
Miner#3: 12 (draw)
Miner#4: 12 (draw)

```

[illegible][illegible]

Demo

- Program runs correctly. (60%)
- Game displays correctly. (10%)
- Oral defense (30%)

Note

1. In demo, we would provide 5 map files. (not sample maps)
2. You could use any programming language to write your own code.
3. You need to use multi-threads or multi-processes to finish this homework.
